Campaign management Team for Biden

Strategy Pointers for further campaigning

We are in the campaigning period and gathered the previous **3 weeks of data** from Twitter.

We want to get insight from this data to help **increase public support** (which we take as a proxy for how they will vote) **for Biden**.

Strategy Pointers for further campaigning

1

How is the discourse around the elections and candidates formed?

2

Which actors/events/statements are represented in the tweets?

3

In which states is Biden behind Trump?
(based on sentiment scores of tweets)

4

What is the most discussed topic in each state and how do people feel about it?

**SENTIMENT
ANALYSIS**

Popular methods for sentiment analysis

	TextBlob	VADER	Flair
Overview		VADER (Valence Aware Dictionary for Sentiment Reasoning), 2014	character-level LSTM neural network
Relevant Output	Something $\in [-1, 1]$		
Advantages (+) Disadvantages (-)	Bag of words + Subjectivity (factual - opinionated) - does not have heuristics of VADER	+ Bag of words empirically validated by multiple human judges for microblog-like contexts heuristics (negations & intensifiers) - typos \Leftrightarrow OOV	+ recognizes typos (no OOV), negations ('not like it'), intensifiers ('so easy') - training is resource intensive. Pre-trained model on IMDB & is extremely polarizing
Interpretation	neg (<0.0), pos (>0.0), neg(rest)		
References	<u>official website</u>	<u>github</u>	<u>github</u>

Whom to trust

We ran all 3 and looked at how much they agree / disagree on the sentiment assigned per tweet

Agreement on sentiment

Consensus TextBlob - VADER	56%
Consensus TextBlob - Flair	30%
Consensus VADER - Flair	36%

Analysis on labels (neg, pos, neutral)

tweet	blob	vader	flair
#NBCboycott @NBCNews fire #ChuckTodd and move the town hall with #trump	neutral	negative	positive
All these people upset because #IceCube is working with #trump! Maybe the problem is you see this rapper as your hero. Time to upgrade your hero's to #MLK #nelsonmandela @Kaepemick7	neutral	negative	positive
Head Thread. #Trump & co. keep committing all manner of Fraud, Libel, Corruption, etc, to keep afloat. #HunterBiden #ButHisEmails #RudyColludy #Burisma https://t.co/QpWaukVErn	neutral	negative	positive
@business @bsurveillance : @tomkeene & @flacqua : #Stephanie you cant compare #Trump's performance in 2016 to now. Why? He had no record in public office then. He does now!!	neutral	negative	positive
@FLOTUS @realDonaldTrump Smh...no doubt, #donalddump is the trick.\n#HushMoney\n#Individual\nhttps://t.co/jVJt2O5oqJ	neutral	negative	positive
@FLOTUS @realDonaldTrump This is how #donalddump gets money in his pockets...steals from kids with cancer.\n#TrumpIsACriminal\n#TrumpForPrison\n#TrumpIsAPos\nhttps://t.co/YbMVaOgcY2	neutral	negative	positive
@realDonaldTrump No doubt...garbage.\nDesperation from #donalddump & his lackeys.\n#TrumpIsANationalDisgrace\n#TrumpIsALaughingStock\n#TrumpLiesEverytimeHeSpeaks\n#TrumpIsAPos\nhttps://t.co/Oqdv6Oqj8n	neutral	negative	positive
@GOP @realDonaldTrump This is how #donalddump gets money in his pockets...steals from kids with cancer.\n#TrumpIsACriminal\n#TrumpForPrison\n#TrumpIsAPos\nhttps://t.co/YbMVaOgcY2	neutral	negative	positive

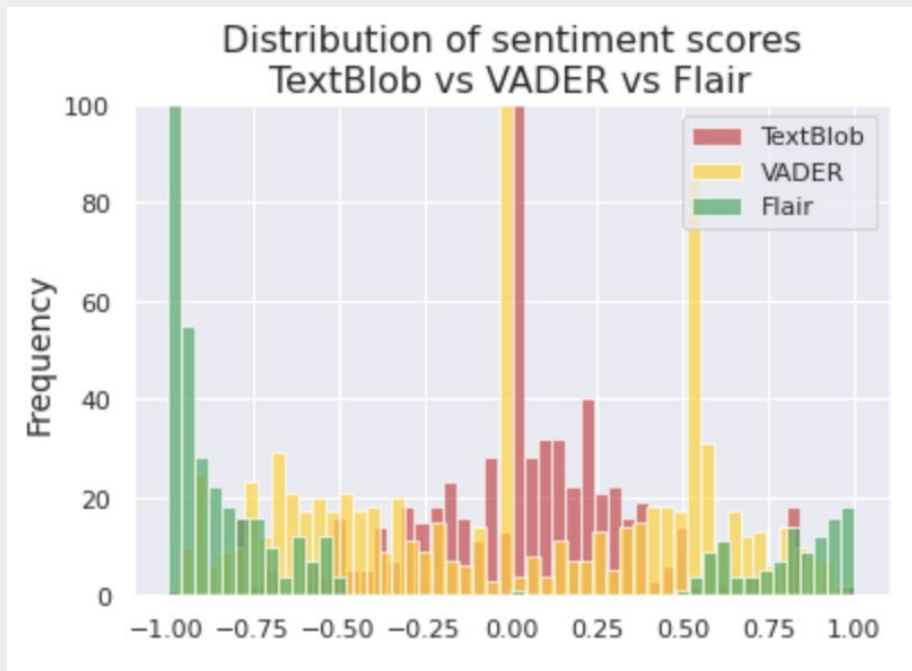

Further exploration of sentiment score

Observations:

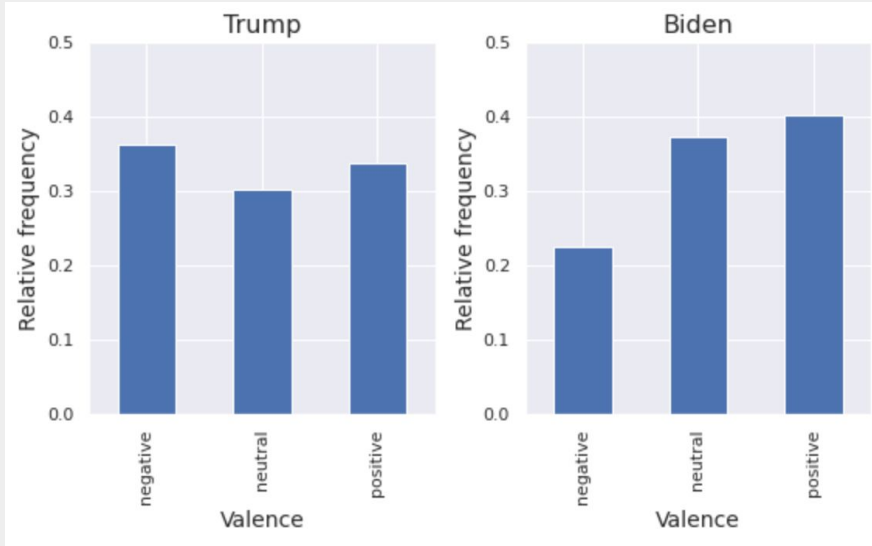

- Flair seems very polarizing (by comparison)
- TextBlob and VADER have a 'strong' neutral category
- TextBlob and VADER look plausible

Decision: we chose VADER

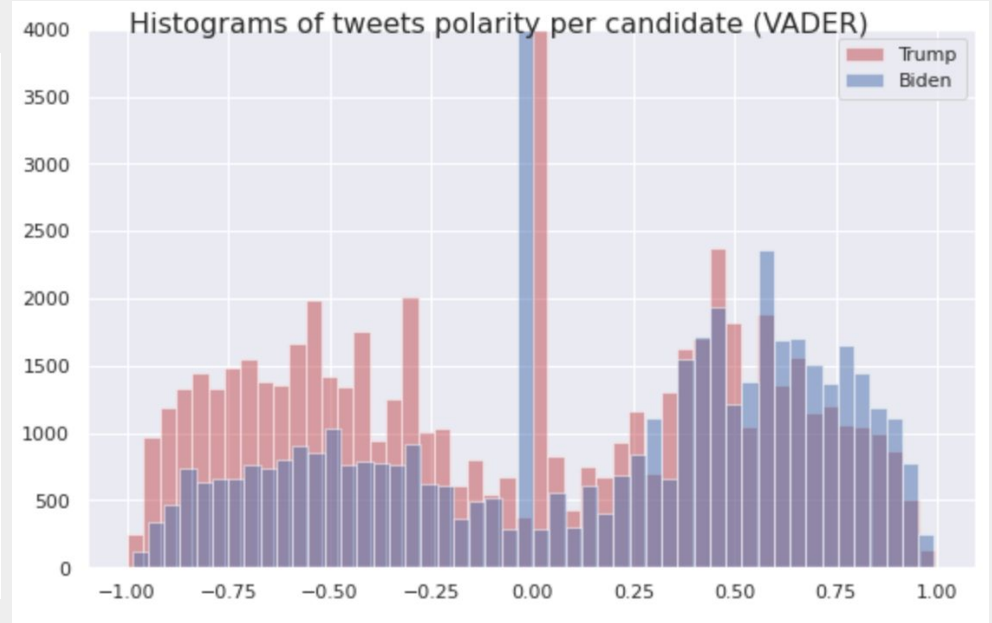

Analysis on score $\in [-1,1]$

Overall sentiment in Biden vs Trump tweets

Sentiment label: categorical \in {negative, neutral, positive}

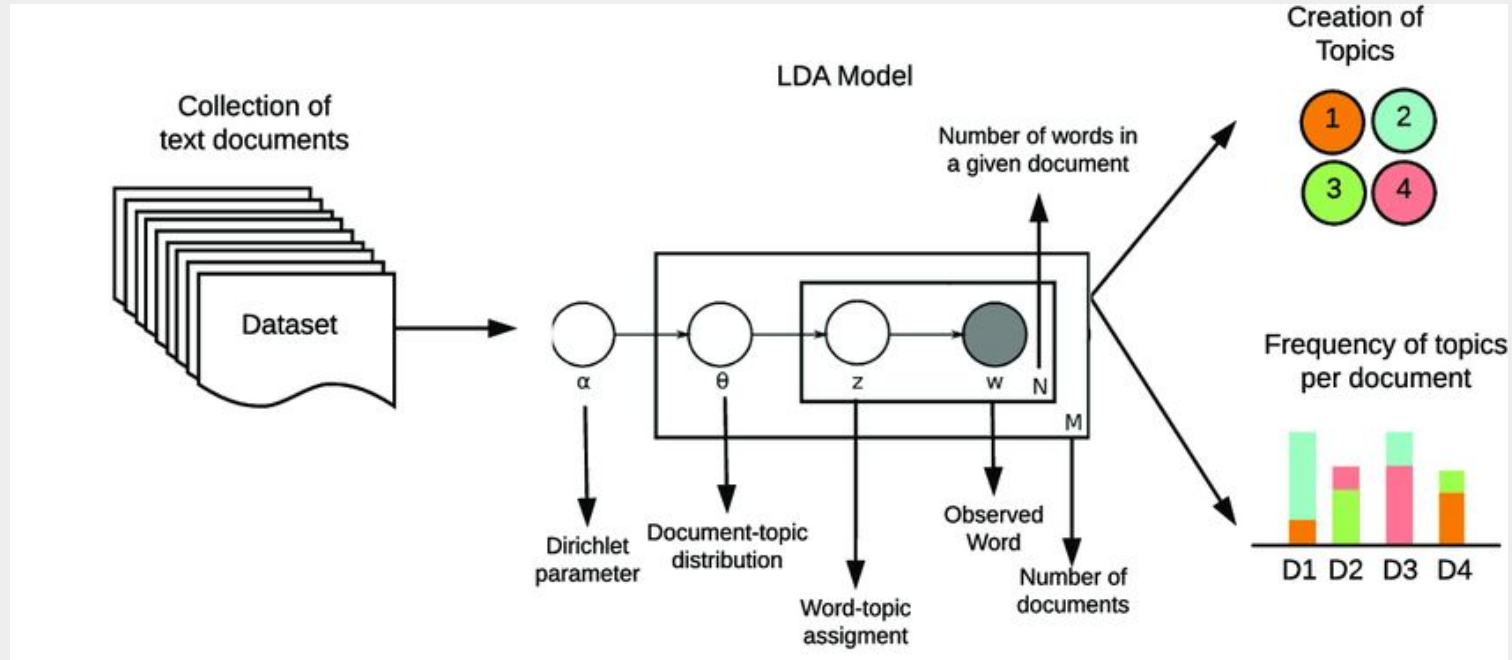

Sentiment score: continuous $\in [-1,1]$

TOPIC MODELLING AND PREDICTION

Latent Dirichlet allocation MODEL

STRATEGY

Step 1

Computing the coherence scores for the different number of topics

Step 3

Topics extraction and visualization

Step 5

Predicting the topics for the new tweets

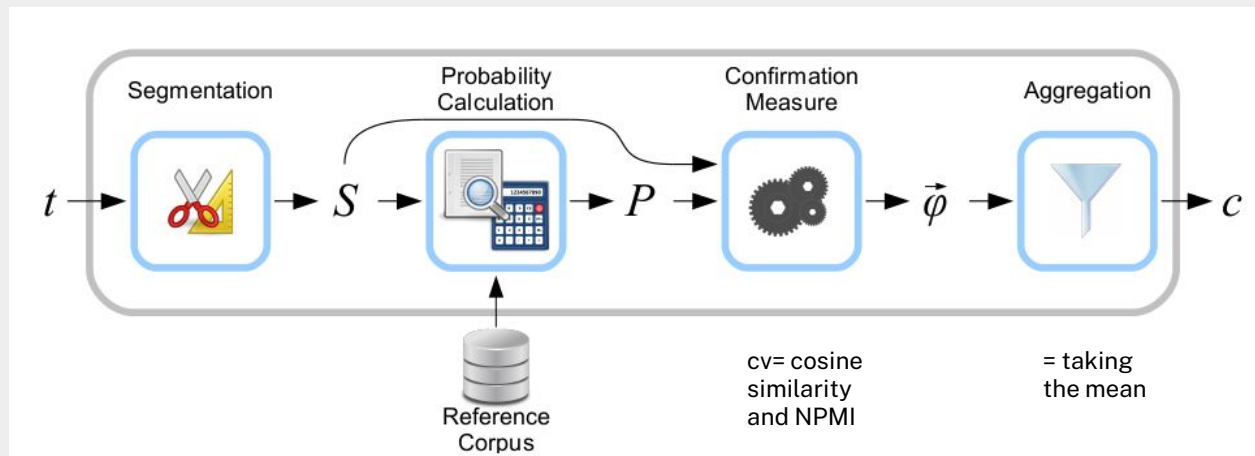

Step 2

Creating the model with optimal number of topics

Step 4

Labeling the tweets related to the topics

COHERENCE SCORES

t : Topics coming in

S : Segmented topics

P : Calculated probabilities

Phi vector : A vector of the “confirmed measures” coming out from the confirmation module

c : The final coherence value

(Something $\in [-1, 1]$)
